

A small application, downloaded on a smartphone, allows one to select items from the menus of a restaurant – or to mix

from different restaurants –

to assemble the desired lunch or dinner.

Select the place and time for pick-up or delivery, complete the order and that's it!

Pick-Up Your Lunch App!

1. Create your menu
 2. Choose pick-up/delivery
 3. Choose the time
 4. Choose the place
- Done!

I feel like ...
sushi. What are
today's specials in
"the Square" area?

PICK-UP YOUR LUNCH

Available menus and orders are exchanged when connectivity (UMTS, GPRS, WIFI) is available; the application though has local data for off-line use also. When connected, menu updates can be either complete or minimal, context-aware, based on the user's preferences. The application retrieves the updated menus, the daily specials, or simply lists the "Tuesday-favorite" for a fast 1-click order, same menu, same time, same place! The user's preferences and context can help by automatically filter the available offer based on her/his tastes (e.g., no ethnic cuisine), location (e.g, only restaurants located in the "Train Station" area) and time (e.g, at 5:00PM only dinner menus are available).

A group of restaurants have joined forces to offer a wide variety of dishes from different cuisines to be prepared just in time for them to be either delivered or collected at one of the available pick-up points.

Compose your lunch or dinner with a few clicks by putting together the items from menus offered by your favorite restaurants and order it with your phone, to find it ready when and where you want.
